I currently have almost a year in the world of frontend development, with basic foundations in web design. I am an active and proactive person with ambition and curiosity. I like to be in constant progress and work in a team. I am patient and communicative. I hope to be part of a team that allows me to grow as a professional, but also contribute to mutual growth.

Today I want to perfect myself in frontend development and the study of the English language. Also, later on, I want to study more backend to become a fullstack developer.

School website - Frontend/backend

I have been working on it since mid-August, with the director of the institution.
Customer contact: 3402-659856.

Expense Tracker - Frontend/backend

It is a site made as a personal practice, using Tailwind, React, boxicons, react-chartjs-2, react-redux, mongoose, nodemon, cors, express, dotenv, among other resources. It is a website that classifies your money for easy control thanks to the graphs and lists. This time I decided to make a basic backend to store the data in a database.
DEMO:

Satellite tracking system (CEMISA) - Frontend

In this project I worked as a frontend developer using React and Tailwind. My main tasks were: the redesign of the user interface directly on code. My implementations were essential for the updating of technologies, which had become obsolete, and the optimization of the UX-UI.

E-commerce - Front-end

It is a work of my own that I used to study and practice. In this application I implemented axios, bootstrap, react-router, redux, react-loading-skeleton. I made this store consuming the public API 'fakestoreapi.com'

TrendingMovies - Frontend

This is one of my first projects, 'responsive', implementing the integration with an API and the development of components with CSS grid layout entirely by hand. Also developed in React using react-infinite-scroll-component to generate the feeling of 'infinite scroll', react-router-dom for site navigation and the content was obtained by integrating the 'movieDb' API.

Contact-manager - Frontend

Another project to improve my knowledge and practice in React. In which I implemented a CRUD with redux, bootstrap, react-router-dom, react-toastify. To achieve an app that handles contacts orderly, visually pleasing and in an intuitive way. This is responsive to various screen sizes.
